# Extra Challenge 

I can read and interpret line graphs.

A Line Graph to Show How Far James Cycled

A Straight-Line Graph Converting Kilometres to Miles

Use the line graph showing how far James cycled over 50 minutes and the straight-line graph converting km to miles to answer these questions:

1. How many metres did James cycle between A and B?
2. How many metres did James cycle between F and H ?
$\qquad$
3. How many minutes did it take James to cycle from C to E ?
$\qquad$
4. How many minutes did it take James to cycle from G to I?
$\qquad$
5. Approximately how many miles did James cycle from $B$ to $D$ ?
6. Approximately how many miles did James cycle from H to I?
$\qquad$
7. Between which two points did James stop cycling and have a rest?

Use this formula to answer the next three questions:
distance $(\mathrm{m}) \div$ time $(\mathrm{min})=$ speed $(\mathrm{m} / \mathrm{min})$
8. Calculate James' speed between B and C.
9. Calculate James' speed between C and D.
$\qquad$
10. Was James travelling faster between $C$ and $D$ or between $F$ and $G$ ? Prove how you know.
$\qquad$
$\qquad$
$\qquad$

## Answers

| Question | Answer |
| :---: | :---: |
| 1. | How many metres did James cycle between A and B? |
|  | 1200 metres |
| 2. | How many metres did James cycle between F and H? |
|  | 1600 metres |
| 3. | How many minutes did it take James to cycle from $C$ to $E$ ? |
|  | 8 minutes |
| 4. | How many minutes did it take James to cycle from G to I? |
|  | 9 minutes |
| 5. | Approximately how many miles did James cycle from $B$ to $D$ ? |
|  | 0.7 miles |
| 6. | Approximately how many miles did James cycle from H to I? |
|  | 0.5 miles |
| 7. | Between which two points did James stop cycling and have a rest? |
|  | Between E and F |
| 8. | Calculate James' speed between B and C. |
|  | $400 \mathrm{~m} \div 4 \mathrm{mins}=100 \mathrm{~m} / \mathrm{min}$ |
| 9. | Calculate James' speed between C and D. |
|  | $800 \mathrm{~m} \div 5 \mathrm{mins}=160 \mathrm{~m} / \mathrm{min}$ |
| 10. | Was James travelling faster between C and D or between F and G? Prove how you know. |
|  | $C$ and $D: 800 \mathrm{~m} \div 5 \mathrm{mins}=160 \mathrm{~m} / \mathrm{min}$ <br> $F$ and $G: 1200 \mathrm{~m} \div 6 \mathrm{mins}=200 \mathrm{~m} / \mathrm{min}$ <br> He was travelling faster between $F$ and $G$. |
